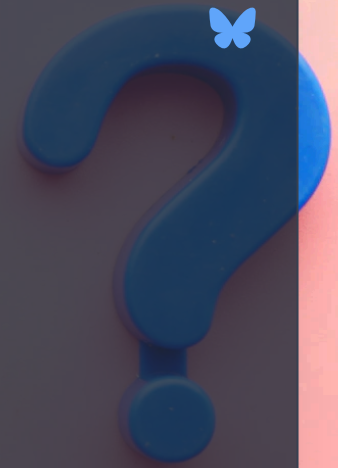
danielroe @ web engines hackfest 🇪🇸

@danielroe.dev



🤦 so ... for reasons:

I would love to know people's frustrations with:

- the current **npmjs.com**
- admin user flows on npm web ui (and cli, locally)

🙏

danielroe @ web engines hackfest 🇪🇸

@danielroe.dev

I'm asking because I'm building an alternative to **npmjs.com**, including the admin ui piece

I have a working mvp, although of course it's very 🚧

if this is something you'd like to contribute to, and you've experienced any of these pain points, let me know - always more fun to build together! 🙏

npmx timeline

1ST WEEK

- Daniel's bsky posts and networking leads to 50 PRs in the first day
- Community chat creation. Invitations through DMs and bsky posts

2ND WEEK

- 1K issues and PRs in two weeks (one every 20 minutes, around the clock)
- 100 contributors invited through open networking. 1.5K stars with no promotion

Vision and Iteration

- Coherent consensual product vision, playful iteration
- Lean on conventions and happy paths
- Empower people that care: a11y, perf, test, i18n, docs

A pragmatic path to a more open future

- Protect our trust network, open up spaces intentionally
- Optimize for adoption
- Meet users and contributors where they are

Working in community

- By humans, for humans
- Collaboration tools as community infrastructure
- Everyone that shares our values is welcome
- New contributors are peers
- Governance through roles, no hierarchy
- Shape our online spaces together

An ever-growing healthy network of trust

Replacements for `fast-glob`

On this page

tinyglobby

`tinyglobby`

`tinyglobby` is a modern, lightweight alternative that provides similar functionality with better performance.

Example:

ts

```
- import fg from 'fast-glob'
+ import { glob } from 'tinyglobby'

- const files = await fg('**/*.ts', {
+ const files = await glob('**/*.ts', {
    cwd: process.cwd(),
    ignore: ['**/node_modules/**'],
+   expandDirectories: false
  })
```

Most options from `fast-glob` have direct equivalents in `tinyglobby`. Check the tinyglobby documentation for the complete list of supported options.

Object.prototype.hasOwnProperty()

Baseline Widely available

The **`hasOwnProperty()`** method of `Object` instances returns a boolean indicating whether this object has the specified property as its own property (as opposed to inheriting it).

> **Note:** `Object.hasOwn()` is recommended over `hasOwnProperty()`, in browsers where it is supported.

Try it

JavaScript Demo: Object.prototype.hasOwnProperty()

```
1 const object = {};
2 object.foo = 42;
3
4 console.log(object.hasOwnProperty("foo"));
5 // Expected output: true
6
7 console.log(object.hasOwnProperty("toString"));
8 // Expected output: false
9
10 console.log(object.hasOwnProperty("hasOwnProperty"));
11 // Expected output: false
```

but ...

we needed a backend

we found atproto

what is the AT Protocol?

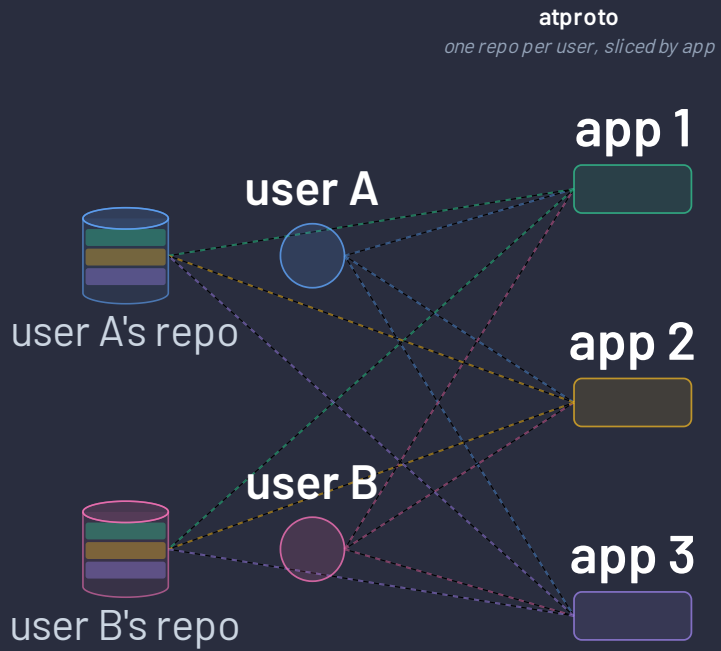
atproto.com

- **federated**
- by implication **public**
- in practice **social**
- designed to outlive any single company

the key ideas

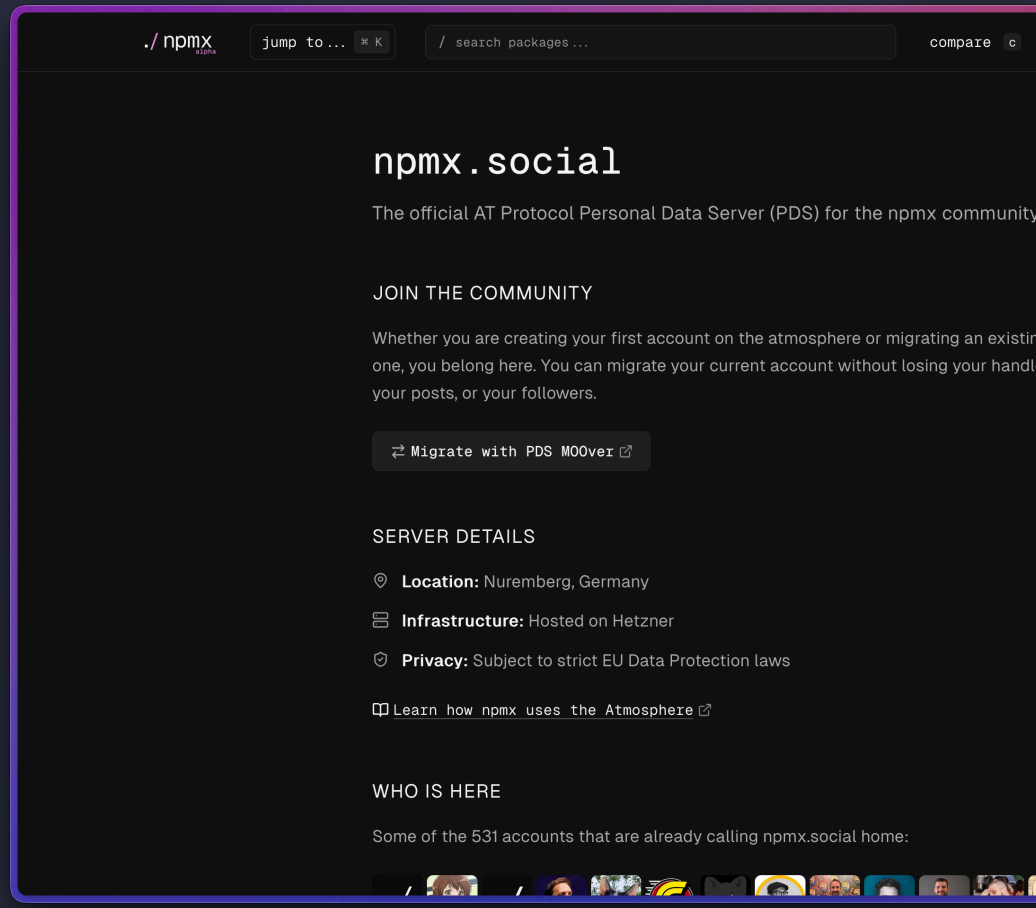
- **DIDs** – decentralised identifiers
  - `did:plc` – registered in a **public directory**
  - `did:web` – use your own domain · `did:web:roe.dev`
- **data repositories** – signed, portable + crawlable
- **lexicons** – shared schemas

who owns the data?



the data is yours. any app can read your repo with your permission.

npmx.social



./ npmx
jump to... ⌘ K
/ search packages ...
compare c

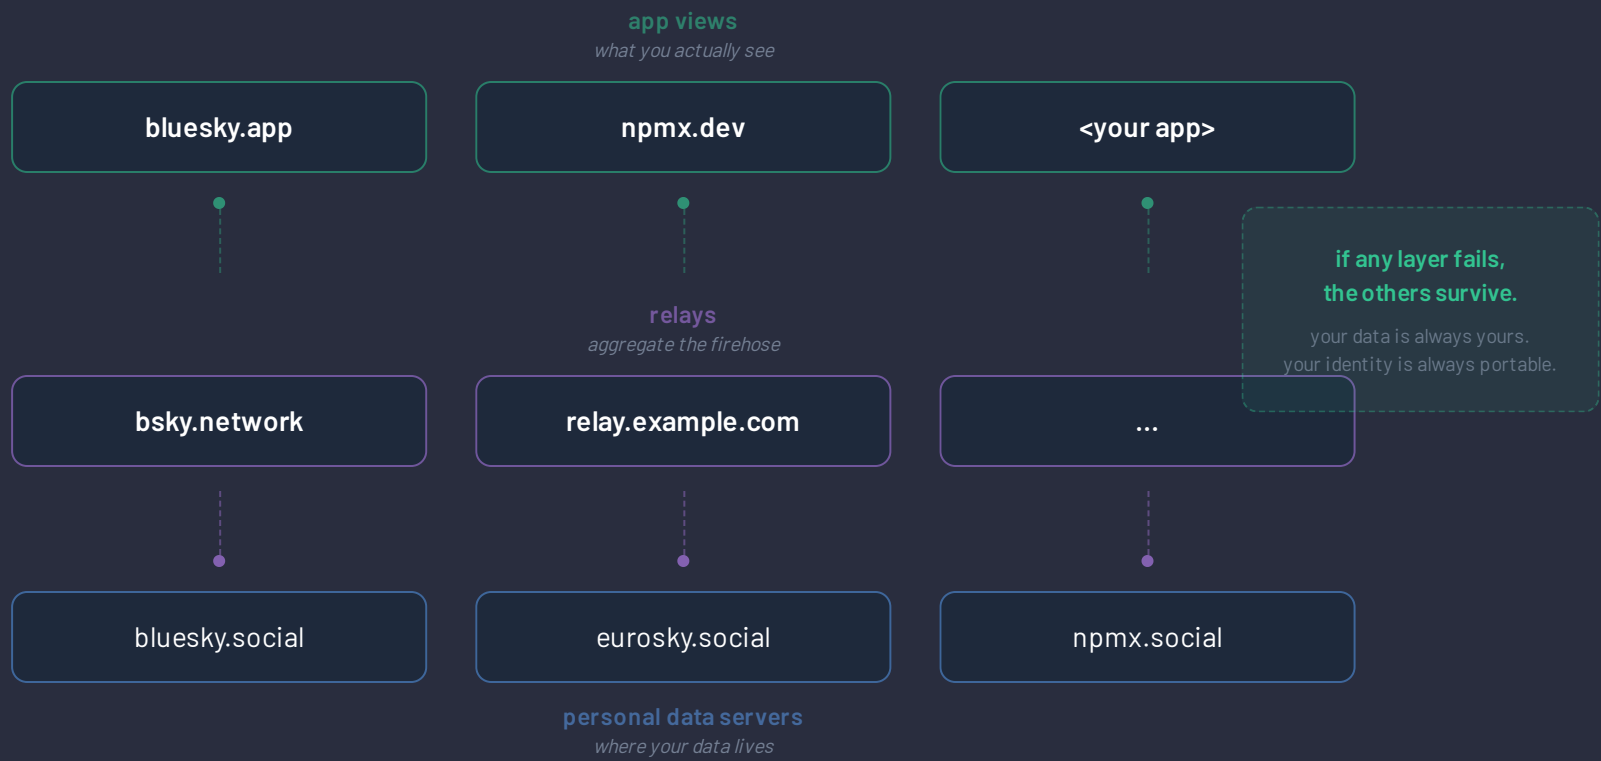
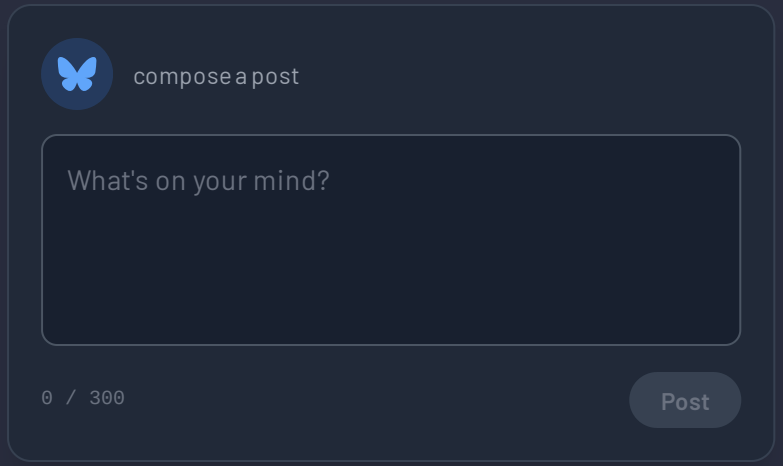
WHO IS HERE
Some of the 531 accounts that are already calling npmx.social home:

architecture



separation of concerns

- your **data** lives in your PDS
- **relays** aggregate updates into a firehose
- **app views** present the data – Bluesky is one. npmx is another
- if you don't like an app view, **build a new one**



1. THE AT URI

compose a post to generate one...

DID — decentralised identity
collection — a lexicon schema
record key — the specific post

2. THE APP VIEW

```
GET public.api.bsky.app/xrpc/
  app.bsky.feed.getPostThread
```

we're hitting Bluesky's **app view** — one way to read the data.
XRPC is just HTTP. the DID resolves to a PDS

3. THE DATA

```
{
  "author": { handle, displayName, avatar }
  "record": { text, facets, createdAt }
  "likeCount": ...
}
```

same data could be read by a different app view entirely

lexicons

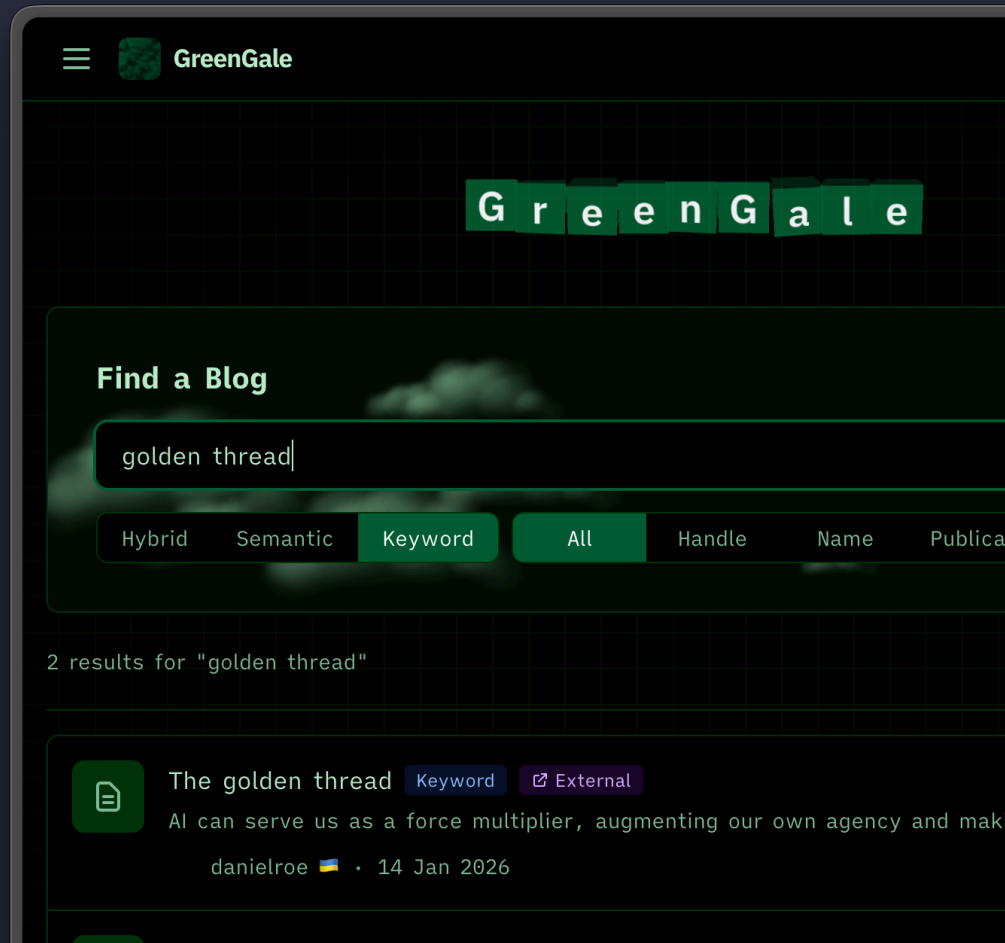
- shared schemas that define data structures
- `app.bsky.feed.post` – a Bluesky post
- `app.bsky.feed.like` – a like
- **anyone** can define new ones

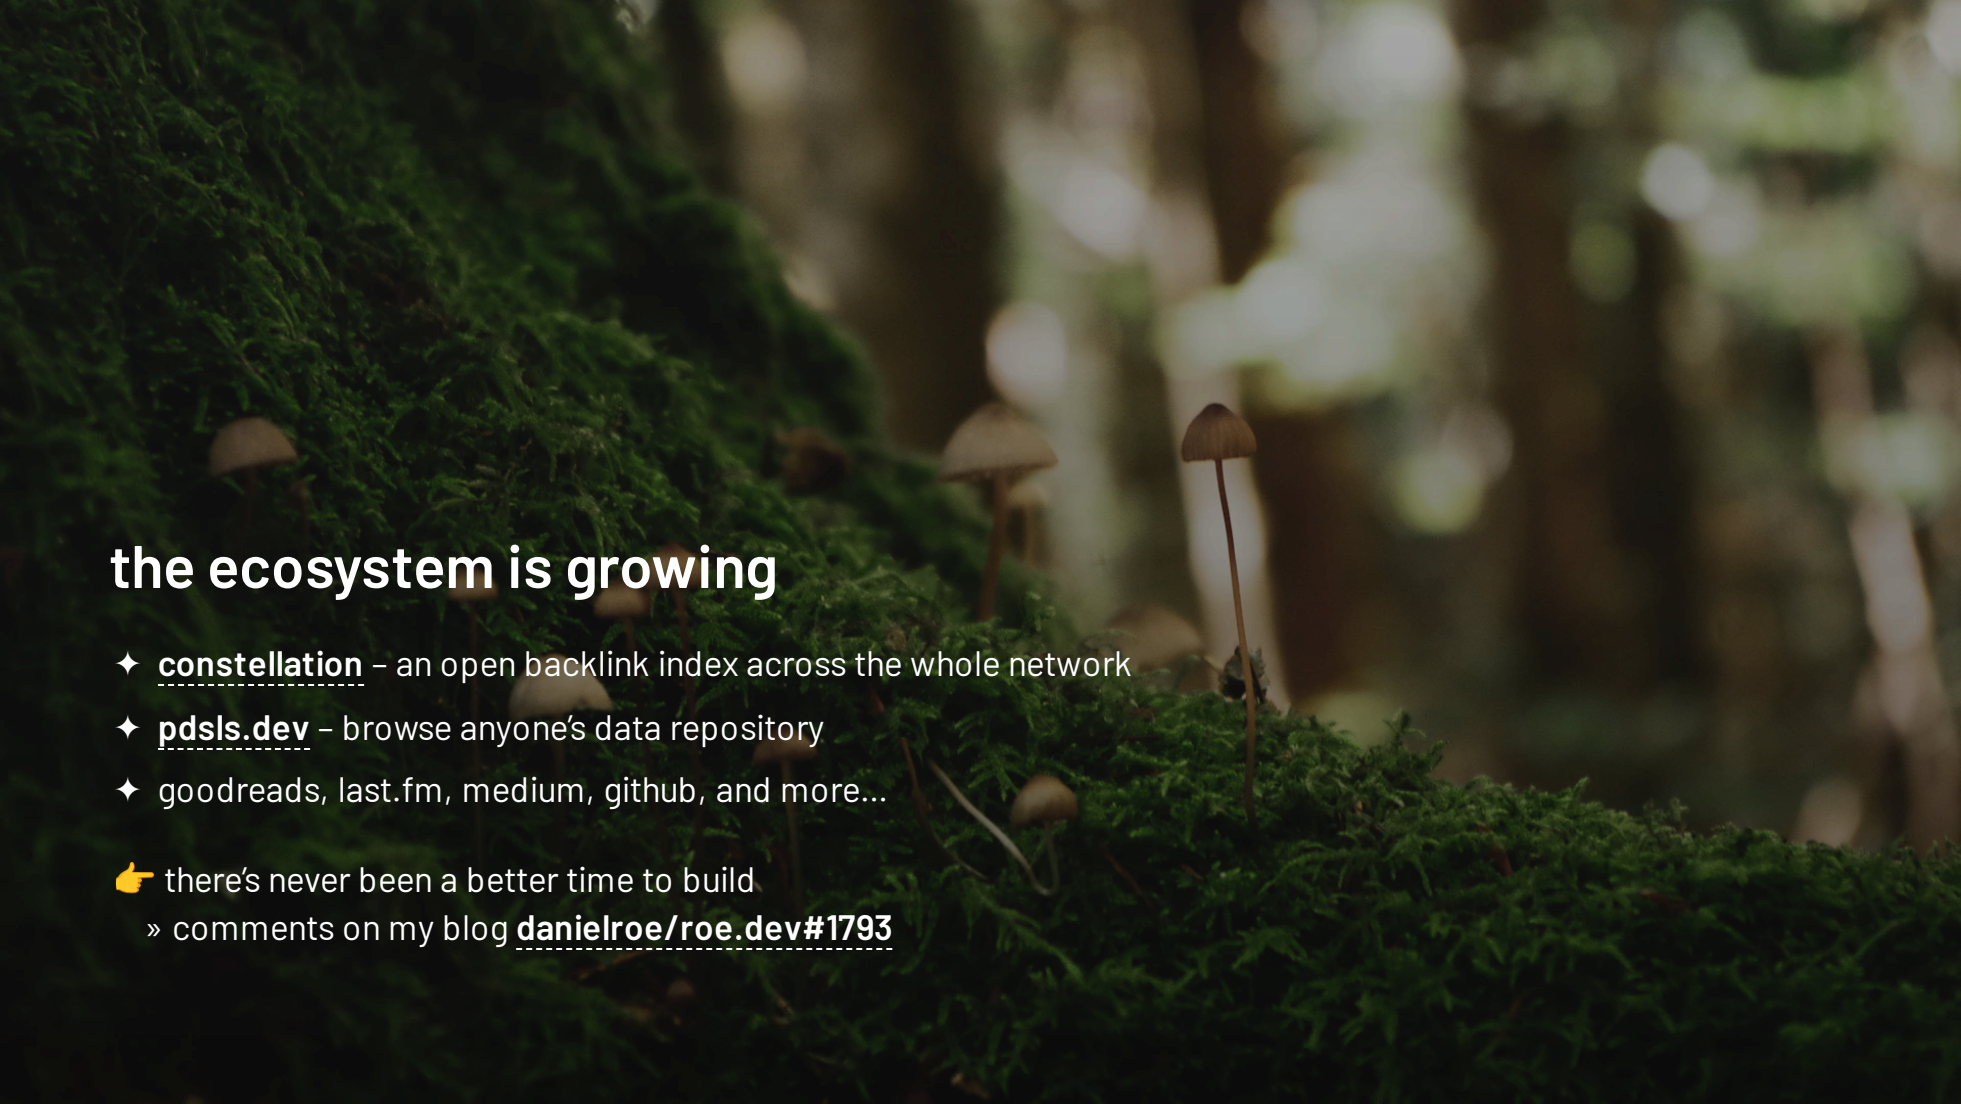
standard.site

a shared lexicon for **long-form publishing**

- ✦ publication, document, subscription
- ✦ adopted by multiple platforms
  - ▸ **Leaflet**, **pckt**, **Offprint**
- ✦ your blog posts become **portable**

... and hackable:
» **danielroe/roe.dev#1827**





the ecosystem is growing

- ✦ **constellation** – an open backlink index across the whole network
- ✦ **pdsls.dev** – browse anyone's data repository
- ✦ goodreads, last.fm, medium, github, and more...

👉 there's never been a better time to build
» comments on my blog **danielroe/roe.dev#1793**

why build with atproto?

- *less* responsibility
- an instant backend for public data
- solving network effects

enshittification en-shit-if-i-kay-shun /ɛnˌʃɪtɪfɪˈkeɪʃən/ *noun*

1. a slow rugpull

~~seizing the means of production~~ being prepared

- your **identity** is your own
- your **data** and **social graph** are persistent
- **resilience** = no single point of failure
- the best kind of guarantee – **with teeth**
